WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High Risk for gusty S afternoon winds/Low relative humidity (RH) Far Eastside and NE Today and Friday.

Weather models have remained consistent with the weather trends the next several days. Near term will comprise of gusty southerly winds due to an offshore trough. Then trending Hot and Dry during the weekend and lasting into early next week followed by possible Monsoonal moisture increases and thunderstorms late next week. Another round of gusty southerly winds will occur this afternoon to early evening. NE CA and Far Eastside will experience gusts between 25-30 mph with RH between 15-25%. Other areas such as the Sacramento Valley will see a slightly lighter wind flow compared to yesterday but some breezes will remain. Similar wind speeds are expected on Friday although the flow will shift more W-SW and the Far Eastside could experience gusts up to 35 mph. Humidity values should trend slightly lower on Friday. Coastal areas will remain moist due to the pronounced onshore flow there. A slight chance of showers and thunderstorms remains across eastern Modoc and Lassen counties late Friday afternoon/evening as a result of some movement of the offshore trough. The activity appears to be more high based showers than any sort of thunderstorm and would be fast moving. A Four Corners High will become established by the weekend and expand northward. Hot temperatures would return with afternoon readings ranging between 5 to 15 degrees above normal lasting well into next week. Humidity values would also gradually lower.

SOUTHERN CALIFORNIA

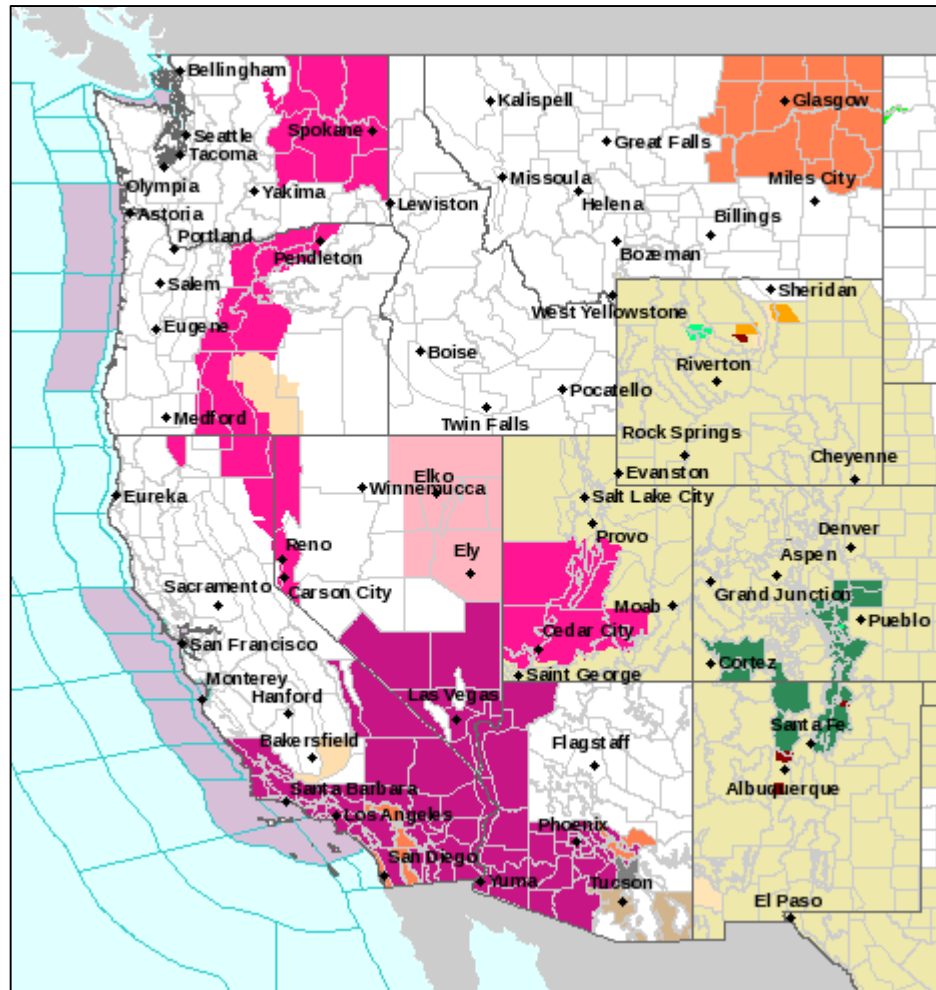

Very hot and dry Friday and Saturday over Southern California.

Sundowner winds expected across Santa Barbara County Friday into Saturday.

Isolated thunderstorms starting Friday and expanding in coverage much of next week.

Significant warming and drying will take place today and Friday across Southern California as strong high pressure over the Central and Eastern United States builds westward. Daytime highs on Friday will soar to as high as 110 across portions of the inland valleys with mountain highs in the upper 90s. These temperatures will be accompanied by humidity values in the single digits and teens. Over the central portions of the state, the heat wave will be less pronounced, but nonetheless temperatures will be above normal with highs around 100 across the inland areas. Complications arise later Friday and over the weekend as Sundowner winds of 20-30 mph develop across Santa Barbara County late Friday afternoon and lasting into early Saturday morning. Gusty offshore winds will also occur across portions of the Los Angeles County Mountains, including the Santa Monica Range Friday morning through Saturday morning. In addition, moisture and instability will begin to increase over the far southern portions of the state later Friday and Saturday with isolated, mainly dry thunderstorms possible over the mountains and deserts east of I-15. Daytime highs on Saturday could drop by 10 degrees or so depending on how much moisture and potential cloud cover moves into the southern portions of the region. Late in the weekend and into early next week, subtropical moisture will continue to invade the area with increasing chances for wetter thunderstorms over the mountains and deserts, including the Sierra. This monsoonal pattern looks to last into much of next week with above normal temperatures continuing along with scattered afternoon wet thunderstorms across the mountains and deserts.
